Stadiums & Arenas

Russia

Otkritie Arena (Spartak Moscow Stadium)

The FC Spartak Moscow, better known to fans as the 'Red and Whites', is one of the most popular sports clubs in Russia as well as worldwide. Equally impressive is the stadium which hosts the team's home games. The Otkritie Arena opened in September 2014, which is considered among the elite stadiums of Europe and the world.

Project description

The operators were looking for a total solution provider that could ensure secure access for guests to the stadium, as well as quick access to the parking areas of the arena. With 42,000 seats in the stadium, and 3,000 parking spaces for cars and buses in the parking areas, access management at the highest level is a necessity. A modern, high-quality solution with exquisite design and an exceptional functionality was needed.

SKIDATA impressed not only as a complete solution provider, but was also able to score points with its well thought out, innovative solutions, high quality design and technological perfection.

In addition to the latest generation of columns and barriers, the vehicle access management solution also includes the premium product among the SKIDATA parking payment machines. Power.Gates, Barrier.Gates and Power.Cash ensure right

from the entrance to the 3,000 parking spaces for the highest comfort and speed.

For the people access to the stadium SKIDATA delivered a very special solution consisting of two access perimeters. In the first perimeter, the validity of the tickets is checked. Season ticket holders can also print their tickets for the game here at the Vario.Gates with Print@Gates functionality. It should be emphasized that these Vario.Gates are without physical barriers in order to ensure a quick passage to the second section, the security checkpoint. Here, in the second perimeter, guests are guided to the different sectors of the arena and pass Vario.Gates with Turnstile.Gates.

Another special feature is the access for people with disabilities. For this purpose SKIDATA installed a combination of swing gates in conjunction with Keydetector.Gates for ticket control.

Facts and Figures

Installation date 2014/2015

Capacity / size Parking facility for more than 3,000 vehicles and busses
42,000 seats, 46,000 for the soccer event in 2018
