

Markthal Rotterdam

In October 2014, the first indoor market hall in the Netherlands opened. Located in Rotterdam, it impresses with its unique concept of being a lively place for shopping, working, going out and living. The size of a football field, a food market with its more than 100 booths is the heart of the market hall. Grocery stores, restaurants and much more complete the culinary offers. In addition, ten floors offer a total of more than 200 apartments and office spaces.

Forward-looking and well-planned vehicle access management with the highest customer service plays an important role for the Markthal Rotterdam. For a variety of users - including owners, tenants, customers, and guests - the almost 1,200 available parking spaces offer a convenient parking option at the vibrant location.

Markthal Rotterdam

Residential P. & Shopping Centers

Netherlands

Project description

Together with Interparking, SKIDATA provides the Markthal Rotterdam with a modern online reservation option. In addition to the visitors of Markthal who can use this system to easily reserve their parking space before their drive, this approach is particularly interesting for the apartment and office owners. Using the online tool, they can conveniently reserve the appropriate number of parking authorizations for customers, employees or guests.

Another pioneering and above all environmentally friendly parking service in the Markthal is Eco Parking. With this solution, drivers of environmentally friendly, low-emission vehicles can park at discounted rates.

With the help of license plate recognition, the entering car and its energy label are identified. This is made possible through a connection between the parking solution and the database of the public service for road transport. If the car has a low emission rate, the driver is issued a special Eco Parking ticket, which grants the discount.

The mission of Interparking, „Making the world move better”, follows the principle of sustainable parking solutions such as Eco Parking. SKIDATA supports this initiative and, with SKIDATA parking solutions and interfaces to third party systems, provides for seamless integration and technical processing in everyday parking management.

Facts and Figures

Customer Interparking

Project Markthal Rotterdam

Installation Date Q4/2014, Q1/2015

Capacity / Size 1,200 parking spaces

SKIDATA Products
