Flex.Gate 'Refit' Mountain

The cost-effective route
for secure access

Create the mountain access system precisely tailored to your needs - with Flex.Gate 'Refit' Mountain. Featuring a variety of functions, the system can be modularly integrated for the most efficient solution.

Your resort on display

The newly developed, powerful userbox provides maximum performance and makes you ready for modern and forward-looking ticket generations of tomorrow. Additionally, the userbox offers you a bright 7' color display to communicate information or promotions directly to your guests.

Superior reliability

Rest assured: Flex.Gate 'Refit' is offline-capable, so you are prepared in case of network failure. With proven security and reliability, the best in class components have been thoroughly tested across different harsh environments. Our proven quality is our commitment to you.

Efficient entry

The long-range antenna offers a fast and convenient, hands-free entry experience for adult guests and children alike. This results in an optimized throughput of around 650 people per hour, per gate. Convenient for your visitors, economical for you.

Easy and quick upgrades

Keep the existing hardware base and mechanical components to upgrade your access readers with just the necessary components. Avoid replacing your entire hardware installation with a cost-efficient switch to the Flex.Gate device generation, increasing the usability and enhancing the experience for your guests.
