Keytag.Gate

Contactless
entry & exit

Finally, no more need to open the window: Keytag.Gate enables contactless entrance and exit to parking. It consists of a reader and a transponder (keytag), which is attached to the windscreen of the vehicle.

Comfort and speed

- Without SKIDATA Keytag.Gate
Braking, opening the window, taking ticket, closing window, and driving through – and at the exit, the whole thing again. The question remains, what to do with the used ticket?
- With SKIDATA Keytag.Gate
The barrier opens, drive through, finished.

Significantly reduced costs

- Affordable to purchase
Passive transponders without battery are environmentally friendly and inexpensive; the readers do not cost more than comparable technologies.
- Affordable in operation
In passive transponders, the battery does not have to be replaced.

The ideal system enhancement

- Based on and complementary to the proven SKIDATA parking system
- Standardized technology including SKIDATA-specific security features (worldwide unique ID, copy protection).
- Advantages over OCR systems.
No error susceptibility of readers; weatherproof.

New business ideas

- Keytag.Gate offers, in addition to comfort for long-term parking customers, a platform for the operator for the marketing of additional services.
- Customizable transponder serves as cost-effective advertising medium. We will be happy to advise you!
