

Coder Light 'OPOS'

Coder Light OPOS is the ideal solution for advance ticket sale! SKIDATA's entry level model for new users of ticket printers. This compact, economically priced device imprints and encodes tickets in one go.

This coder can be placed anywhere

- Thanks to its compact design, this coder is easy to integrate and install. Coder Light OPOS also fits into your advance ticket office.
- The new power pack does not need a fan, therefore it is small and silent. Thanks to the long power cable, the power pack does not need to be placed near the coder.

Enhance the appeal of your destination

- Because more tickets are sold in advance via Coder Light OPOS, waiting time at pay stations in the skiing area is reduced.
- With the option to buy tickets in advance, your customers get right to the slopes without delay and can fully enjoy their skiing pleasure.

One printer for all media

- All barcode and 13.56 MHz tickets of the current SKIDATA portfolio can be processed. In addition, there is a recessed antenna for the RFID data carriers KeyWristBand ISO and Swatch Snowpass 13 MHz.
- Thanks to the USB interface, the coder can be connected to most PCs.

Convenient and reliable

- Additional advantage for the production of RFID tickets: Before it is issued, the produced ticket is read for control purposes.
- Coder Light OPOS provides maximum reliability, because it contains hardly any moving parts. It can easily be cleaned and maintained by the operator.
