sweb[®] Contract B2B

Flexible contingent management for business customers

Forget back office work! With sweb Contract B2B your business customers manage their own parking permits. A win-win situation for you and your customers.

Save time and reduce costs

Reduce administrative costs and efforts by delegating responsibilities to your business customers. Let them manage their own parking spaces for their staff and visitors.

Manage parking anywhere, anytime

No need for sophisticated installations or locally installed software. The administrative functions can be used anywhere at any time, using just a standard Internet connection.

The ideal solution for business parks

As parking operator, you only define the contingent of parking spaces. If required, you can charge your customers an extra fee for spaces exceeding pre-set parking contingent. This means flexibility for your customers and more revenue for you.

Convincing customer convenience

Parking spaces can be managed via easy, transparent step-by-step user interaction. There is no need for costly, time-consuming user training.
