PlateTech.Logic

The perfect-picture software for effortless customer entry.

You can use customers' license plates to allow direct access into your parking facility without them stopping for tickets. Expand your car access management easily with a license plate recognition (LPR) solution and simultaneously prevent ticket abuse.

Add LPR features to your system

PlateTech software from SKIDATA adds LPR features to your parking system to increase customer comfort, improve security and enrich incoming customer data.

Handle discrepancies, quickly

Your staff utilizes the powerful toolset of PlateTech.Logic to handle and prevent exception cases. Ensure a smooth operation of traffic flow across your car parks by operating centrally for multiple car park facilities - even from a national control room for car parks spread across the country.

Effortless data generation

License plate recognition lets you gather important information about your customers to target and enhance your marketing efforts (in accordance with country-specific legal regulations). PlateTech also provides reports that help you monitor and improve LPR performance.

Easily access your data

PlateTech is deeply integrated with Parking.Logic so you can easily access the combined data set of parking and LPR data to handle typical use cases such as: searching images related to a vehicle's entry/exit transactions (e.g. for tracking vehicle damage) or setting the correct price for a lost ticket based on the vehicle plate number's recorded entry time.
