## Storage lockers - Integration

Perfect  
integration solutions  
of lockers.

What to do with your ski equipment after a wonderful day of skiing? Ski storage lockers is the solution. Through the use of an universal adapter, the electronic depot systems from digiCOM depotmaxx, GANTNER Electronic or Metra Inženiring are integrated into the SKIDATA cash desk system and guests can comfortably use their ski ticket to operate their storage locker.

### Efficient sales process

All electronic storage systems are fully integrated into the SKIDATA POS systems. This means that the assignment of an available locker can take place together with the purchase of the ski ticket. The software solution ensures that there is never a double assignment of a locker.

### Exact revenue allocation

The flawless capture of storage locker and cabinet rental data allows for a precise settlement. At the same time, you increase your operating result by offering fully integrated lockers.

### Profitable sales partnerships

Enter into sales partnerships and increase both turnover as well as customer satisfaction. Thanks to the intelligent software solution, a specific allotment of lockers can be managed for each of your sales partners - such as hotels using OPOS.Cash.

### High flexibility & customer comfort

Through the open interfaces of the SKIDATA system you are always flexible. You can integrate storage systems from a variety of vendors and, if necessary, even use different systems at the same time. Your guests enjoy the highest level of comfort and can conveniently open their reserved storage locker with their ski ticket.
