sweb[®] Interface 'Pay-Per-Use'

Quick and easy
integration

With the integration of the sweb Interface 'Pay-Per-Use' (PPU) into your current or planned website or app, you can charge parking costs to your registered customers based on the actual duration of use and process the payment automatically. For a convenient and secure cashless payment method.

Simple integration

The integration is quick and easy to implement, allowing you to offer your customers an attractive service with very little effort. You keep control by fully integrating the sweb Interface into your parking system as well as your business and audit processes.

Add flexibility to the customer experience

Your customers store their payment data during the one-time registration. With the SKIDATA PPU web service, payments are processed automatically based on the actual duration of the service used. This provides the high level of flexibility and cost transparency that customers always appreciate.

Investment matching your specific needs

For you, the investment is both straightforward and controllable - because costs are incurred based upon your actual use of the interface. Once the business model has proven itself to be successful you can expand its application at any time. Likewise, you can also reduce its usage if you choose.

Centralized hosting, high-level security

What does cloud-based, centralized hosting mean for you? Automatic version updates that provide a maintenance-free and always up to date business process together with high availability and reliability.
