

## Management.Service 'sweb.Cockpit'

Make current information – virtually in real-time – the basis for your success. You only need a browser to access important data at any time such as sales, access frequency, equipment status or number of guests.

### Fast overview, easy operation

- **Stoplight principle provides oversight**  
All information can be captured clearly at a glance. The status indicator tells you in clear colors – red, yellow, green – what is happening and where.
- **Intuitive operation**  
You use sweb.Cockpit easily and intuitively, and get reliable, easy to read reports in the form of tables and diagrams.

### Be proactive instead of reactive

- **Act with foresight**  
You know what your company faces, are able to open additional points of sale and plan proactively for visitor flows.
- **Deploy personnel effectively**  
The right data helps you plan your staffing needs ahead of time and use resources effectively.

### Custom-tailored information

- **Your needs count**  
You get up-to-date information grouped according to your wishes: With flexible selection of data and the ability to set information scope and focus, as well as free positioning on the user interface.
- **Always up-to-date**  
All information is updated dynamically so that you work virtually in real-time.

### Developed by users for use on the job

- **Developed with clients**  
sweb.Cockpit was designed and developed in conjunction with SKIDATA clients.
- **Practice-oriented**  
sweb.Cockpit functions as a web application and provides you the latest data at any time and any place. What do you need? Only a browser!

## Features

### Functions

- Fast access to the products of a destination
- Clearly structured display of key figures in quasi-real-time
- Flexible focus adjustment
- Data consolidation and reporting depending on selected key figures
