

## Fair Bolzano (Italy)

The Fair Bolzano positions itself as the exhibition center for the entire European Alps, and for 60 years it has been the most important meeting point for companies in the German-speaking realm and Italy. Its conventions and conferences deal mostly with alpine commercial themes: from tourism and leisure to agriculture and industrial themes. Events at the Fair Bolzano annually attract more than 2,500 exhibitors and some 220,000 visitors to Bolzano. And when it comes to controlling the streams of visitors quickly and securely, as well as optimally managing the parking, the Fair Bolzano proved to be a forerunner and was the first Italian organization to install SKIDATA's innovative Vario.Gate access technology, combined with mobile Handheld.Gates.

# Fair Bolzano

(Italy)

## Project information

<b>Access points</b>	8 Vario.Gate 4 HH ASx70i HH88 (Handheld.Gate)
<b>POS system</b>	SIAE certified cash desks with integrated Coder Unlimited
<b>Data media</b>	RFID, Print@Home or barcode tickets
<b>Parking solution</b>	Parking lot equipped with SKIDATA system

The intelligent Vario.Gate reading system requires only a single scanning point to read different types of tickets. It works with turnstiles and turnstile gates from a wide range of manufacturers, and can be easily reconfigured from entry to exit mode. In parallel, SKIDATA Handheld.Gates provide flexible, mobile access control. These units display ticket properties at any time and any place on a handheld and enable you to systematically control visitor flows and effectively prevent ticket fraud. SKIDATA technology not only provides the Fair Bolzano with secure and efficient people access, it also takes on parking management.

## Special Features

- Fast access
- RFID, Print@Home or barcode tickets
- Mobile access control with Handheld.Gates
- Entire project managed by SKIDATA

## Vario.Gate

SKIDATA Vario.Gate makes people access fast and flexible. For all tickets, regardless of type, format or size, only one scanning point is needed. A separate display shows information on access or mixes in advertising. In emergencies, Vario.Gate automatically releases the gate to provide unimpeded egress. This accelerates access to trade shows, stadiums and arenas, and increases the security.
