

Capital Square

Malaysia

Capital Square is a well known high-rise complex with several annex buildings on Jalan Munshi Abdullah in the center of Kuala Lumpur, Malaysia. Aside from a shopping building with retail stores, Capital Square also includes 2 blocks: a 36-storey block with a total of 180 condominiums and a 40-storey block with offices. The parking garage is directly connected to the shopping center and office building and was equipped in the year 2000 with a SKIDATA 450 system.

Although the operator knew the advantages of SKIDATA parking systems and was also aware of the excellent quality of the products, he nonetheless decided at the end of 2014 for

a new generation of SKIDATA devices for only one reason. The new SKIDATA Malaysia branch office which was founded in May 2014 could offer him professional and reliable after-sales service, and that is exactly what he wanted. Through the completion of a comprehensive maintenance contract, the customer now enjoys the competent services of SKIDATA Malaysia.

Long-term parking customers also experience a special level of comfort at Capital Square: A separate entrance provides them access to a specially designated parking area with a total of 1,200 long-term parking spaces.
