## Door.Gate 'Pedestal'

Stable, mobile  
and touchless  
venue access

The barrierless entrance experience for premium venues. Mobile and cableless positioning all over the venue matches your needs in flexible access solutions and meets environmental requirements.

### Transportable and customizable design

Integrated wheels enable you to flexibly position an entrance control wherever needed throughout your venue. Its maximum stability prevents to be pushed over by your guests. No turnstiles block the welcoming impression of your venue, also welcoming disabled people without barrier issues. The design is customizable to fit your facility's Corporate Design.

### Multiple ticketing options

No matter what kind of ticketing technologies are used in your venue, all common forms can be read such as: 1D and 2D barcodes, RFID tickets and NFC technologies. NFC in particular increases customer convenience by providing a digital, secure ticket.

### Long runtime

The device is fully wireless and operates up to 10 hours without having to be recharged. Thus, the continuous long-term operation is guaranteed. It is always connected to your WIFI and you may use it at different places in your venue. Continuous entrance and exit situations as well as multiple events across a single day can be easily handled.

### Less staff and touchless access

For VIP areas, the Door.Gate 'Pedestal' perfectly fits into your premium environment. Your guests scan their own tickets (as self-check-in) at the pedestal and no personal contact with your staff is required. With an operator light integrated at the rear side of the pedestal, one steward can oversee multiple checkpoints from a safe distance.
